A 16-bit binary number is called a word in a 16-bit processor. • Bus: A bus is a group of wires/lines that carry similar information. • System Bus: The system bus is a group of wires/lines used for communication between the microprocessor and peripherals. • Memory Word: The number of bits that can be stored in a register or memory element is called a memory word. <p>Digboi, Assam, India 9JV4+C8Q, Digboi, Assam 786171, India Lat 27.393637° Long 95.60574° 01/10/21 11:48 AM</p> |
| Old Library building ICT Room 1 | |  <p>Blackbody Radiation Any object with a temperature above absolute zero emits light at all wavelengths. If the object is perfectly black (so it doesn't reflect any light), then the light that comes from it is called blackbody radiation. The energy of blackbody radiation is not shared evenly by all wavelengths of light. The spectrum of blackbody radiation shows that some wavelengths get more energy than others. Three spectra are shown, for three different temperatures. (One of the curves is for the surface temperature of the Sun, 5770 K.)</p> <p>Digboi, Assam, India 9JV4+C8Q, Digboi, Assam 786171, India Lat 27.393637° Long 95.60574° 04/10/21 12:12 PM</p> |
